### The inventor

Thomas Alva Edison is one of the most famous inventors in the history of technology. He made many great contributions to the development of electricity and the phonograph. Edison was born in Milan, Ohio, on the 11<sup>th</sup> of February in 1847. Many inventions were created by Edison. He also improved Alexander Bell's invention (the telephone) by modifying the microphone in it. In 1928, Edison was awarded the Nobel Prize in Physics. He was always interested in technology and wanted to invent something that would make life easier for people.

The future inventor read his first scientific book at the age of 9. At the age of 13 Thomas worked as a newspaper salesman on trains, all the money was spent on books and experiments in a laboratory equipped in the basement. In 1863 Edison mastered telegraphy and worked as a telegraph operator for 5 years. In 1878, Edison invented the kinetoscope. It was the first device that could show moving images.

After the invention of the kinetoscope, Edison continued his work in the field of electrical engineering and technology. Then the phonograph was invented in 1880. It was the first commercially available device for recording and playing back sound.

Thomas Edison's legacy lives on in the form of his inventions and contributions to the field of technology. His work has had a profound impact on the world and continues to inspire people today.

#### Ancient Beliefs about Personalities

Long ago, a smart man named Claudius Galen from Rome considered why people behave and feel as they do. He used ancient Greek ideas about the body as the basis and developed a theory. This theory suggested that various fluids inside our bodies impact our behavior.

This concept traces back to an earlier time with a Greek philosopher named Empedocles. He thought that everything was made of four main elements: earth, air, fire, and water. Each element had distinct qualities.

Later, a famous figure named Hippocrates, also known as the "Father of Medicine," connected these elements to fluids in our bodies, calling them "humors." Galen expanded on this idea. He believed that the balance of these humors shapes our personalities. An excess of one humor can influence our actions and feelings.

Galen classified four main personality types: **sanguine**, **phlegmatic**, **choleric**, and **melancholic**. A sanguine person, with excess blood, is cheerful and sociable but may also be self-centered. A phlegmatic individual is calm and logical but can also be slow and reserved. A choleric person is hot-tempered. Lastly, a melancholic person tends to be creative but sad.

Galen believed that imbalances in these humors lead to personality challenges. He suggested that adjusting one's diet and physical activity could help restore balance. In severe cases, treatments like purging and bloodletting were practiced.

While Galen's theories were widely accepted for a long time, they were eventually replaced by new discoveries during the Renaissance era. Despite his medical concepts being denied, they continued to influence psychologists for many years.

Although we no longer support Galen's beliefs today, some aspects of his thoughts on the link between physical and mental well-being are still applied in modern therapies.

## *The Current State of Artificial Intelligence*

### **What is artificial intelligence?**

The term artificial intelligence was invented in 1956 by computer scientist John McCarthy. The context was a workshop at Dartmouth College in New Hampshire that attempted to “find how to make machines use language, form abstractions and concepts, solve kinds of problems now reserved for humans, and improve themselves”. The field has evolved since then, but AI is still about creating machines that can do what we can, and more. **Matthew Sparkes**

### **Development of AI:**

Artificial intelligence (AI) today is more advanced than ever before. Powerful AI systems that understand language have made significant progress. These systems can now generate large amounts of text that is very similar to human writing. They can solve complex problems and even help in training other AI models. However, with these improvements come important concerns raised by leading researchers and technical experts.

### **Challenges and Calls for Caution:**

Important figures in the AI field have urged research labs to finish major AI experiments for now to establish safety guidelines. This pause is key for guaranteeing responsible development and implementation of AI technologies. Some government authorities, like those in

Italy, have taken steps to restrict AI applications temporarily. The focus is on regulating large language models and other generative AI systems that create content in response to human input.

### **Historical Patterns and Current Trends:**

The history of AI is marked by cycles of high interest followed by periods of decreased activity. The past decade has seen significant progress due to growth in computing power, data availability, and the development of neural networks. These innovations have allowed AI systems to be good in tasks like voice and face recognition, playing games, and solving complex scientific problems.

## Impact on Society and Jobs:

Generative AI technologies are changing different fields like education, real estate and law. They potentially can automate tasks and affect millions of jobs worldwide. However, there are worries about spreading false information, invading privacy, and ethics. Using AI chatbots and other content-creating tools is changing how people use technology, leading to questions about its wider effects.

**“ChatGPT can generate entire essays that often appear identical to writing”**

## Regulatory Efforts and Ethical Considerations

**300m**

**Number of jobs that could be affected by generative AI**

Efforts are going to regulate AI technologies and reduce potential risks. Organizations advocating for clarity and responsible AI development are pushing for ethical guidelines in research and implementation. The debate around balancing innovation with ethical considerations continues, highlighting the need for collaboration between technology developers, regulators, and the whole society.

## Looking Ahead

As the field of AI continues to develop rapidly, managing the impact of generative AI technologies remains a critical challenge. Balancing technological advancements with ethical standards and societal well-being is key to ensuring a sustainable and beneficial future for artificial intelligence.

Facts and Myths about Immunity

- **Effect of Stress**

Long-term stress can weaken your immune system, but short-term stress might have some positive effects.

- **Aging and Immunity**

As people get older, their immune system tends to become weaker. However, some older individuals still have strong immune systems, possibly due to having a diverse range of good bacteria.

- **Thymus**

The thymus gland gets smaller by about three percent each year until middle age.

- **Vitamin C and Immunity**

While vitamin C is essential for overall health, its direct impact on the immune system is unclear. On the other hand, vitamin D deficiency can make you more prone vulnerable to catching colds.

- **Boosting Immune System**

The only proven way to improve immunity is through vaccination. Boosting general immunity is mostly a myth as our immune system usually performs well on its own.

- **Impact of Sleep**

Adequate sleep is essential for a healthy immune system. Lack of sleep can affect our body's functions, including the immune response.

- **Exercise and Immunity**

Moderate exercise is beneficial for the immune system, while extreme physical activity can stress the body and lower immunity. Aim for regular moderate exercise for a healthier immune system.

- **Common Myth**

There is a misconception that children need to get sick to strengthen their immune systems, but young children under five are more vulnerable to infections.

**Задание 13. Придумать или составить диалог/ полилог по теме «Права подростков». Диалог должен содержать все времена группы Past и Present и не менее 8 реплик с каждой стороны.**

Read the dialogue with the correct pronunciation and intonation.

Journalist: Good afternoon, today in our studio is the famous psychologist Giovanna Devereaux, and the topic of our conversation is what a teenager should do if he suffers from domestic violence. First of all, I want to clarify what can be considered violence.

Devereaux: Violence is considered any action that undermines a person's self-esteem: criticism, insults, intimidation, gaslighting, isolation - cutting off contact (when they stop talking to a person in order to punish).

Journalist: What should a child or teenager who has experienced violence from loved ones do?

Devereaux: Firstly, tell a supportive adult about this, contact a psychologist or another adult.

Journalist: However, as we know, teenagers often prefer to hide the presence of problems.

Devereaux: Many children are very afraid to share with psychologists, especially with school psychologists, because they think that they will tell their parents everything or blame them for the fact that they themselves are to blame. But such fears are in vain. Professional psychologists respect confidentiality laws and know how to talk to parents in such cases.”

Journalist: And yet, what to do if there are no adults near the teenager whom he can trust?

Devereaux: Call the psychological support hotline. They will definitely help you solve the problem and tell you where to go for direct help.

Journalist: Is it possible to develop a behavioral strategy to protect yourself from moral violence?

Devereaux: Of course, it is very useful to have skills in assertive behavior. These are special communication techniques that will help you resist criticism, insults and rudeness. This is taught during consultations with a psychologist.

Journalist: However, such skills will take time to master. What can a teenager do in the current moment to prevent consequences?

Devereaux: Distance yourself as much as possible. If we are talking about the complete destruction of a child's personality by an abuser, then the above methods will not work. In such cases, you need to run away from such a parent to grandparents, aunts and uncles. That is, stop all communication altogether.

Journalist: What should a teenager do if there is an immediate threat to life?

Devereaux: Contact the guardianship authorities or the police. This is for the most extreme cases. Abusers always deny that there is any problem on their part. They, of course, can come to listen, nod, but at the same time blame the child for everything. It is very difficult to work with real abusers.

Journalist: And finally, what advice would you give to teenagers to avoid the consequences of domestic violence as much as possible?

Devereaux: Remember that you are not to blame for anything. You need to write down somewhere for yourself: “I'm not bad,” “I don't deserve this,” because no one in the world

deserves to be treated badly. Violence in any form is an absolutely unjustified form of influence, no matter for whatever good purpose it is used.

**Задание № 14** Подобрать 4 фото по теме «Человек и общество» для каждого профиля: технического, социально-экономического, естественно-научного и гуманитарного

**Give the full description of the photo for your specification.**

- Introduction:

- Briefly describe the main objects in the photo: people, their profession, objects, etc..
- Describe the setting (landscape, architecture, interior, etc.).

- Profession description:

- Describe the main responsibilities and tasks of the profession.
- Mention why this profession is important for society.
- Highlight the skills and qualifications required to work in this profession.

- Personal reflection:

- Share your personal thoughts on the profession in the photo.
- Discuss whether you are considering a career in this field and why.

### 1. Robotics engineer (technical profile)

[https://ru.freepik.com/free-photo/ordinary-human-job-performed-by-robot\\_94948830.htm#fromView=search&page=1&position=25&uuid=d60cb0ab-6afa-475e-8c71-39c31df60b25](https://ru.freepik.com/free-photo/ordinary-human-job-performed-by-robot_94948830.htm#fromView=search&page=1&position=25&uuid=d60cb0ab-6afa-475e-8c71-39c31df60b25)

Robotic engineers are very important in creating technology now and in the future. They can work in many different industries like healthcare, farming, exploring space, transport and others. They **will make and improve** robots for jobs like delivery of food and things, putting things together, doing medical operations, planting fruits and vegetables, exploring space, and driving on their own.

In factories, robotic engineers **will create** robots to help with tasks like putting things together, fixing and packing. In healthcare, they **will develop** robots for surgery, taking care of patients, and helping them get better. These robots can give support to patients, helping them with everyday tasks and making their lives better. In farming, robotic engineers **will create** robots for planting, picking fruit and vegetables, and watching over plants to make things more efficient and better for the environment. During next ten years robotic engineers **will be also working** on self-driving cars and drones for delivering things, managing warehouses, and moving things around in the logistics industry.

Scientists believe that by 2040 robotics engineers **will have developed** advanced robots that will be able to do complex tasks with more efficiency and make technology better.

## 2. Financial analyst (economics)

[https://ru.freepik.com/free-photo/business-research\\_5398843.htm#fromView=search&page=1&position=0&uuid=33287708-dd09-4958-98b0-9816c8c89b94](https://ru.freepik.com/free-photo/business-research_5398843.htm#fromView=search&page=1&position=0&uuid=33287708-dd09-4958-98b0-9816c8c89b94)

The job of a financial analyst is popular now and **will continue** to be popular in the future. It is likely, that in 20 years, the role of a financial analyst **will have changed** significantly. They **will be using** more advanced technology and data analysis tools to make informed decisions about investments and financial strategies. Financial analysts **will work** closely with artificial intelligence and machine learning algorithms to predict market trends and risks.

Financial analysts **will also be required** to have a deeper understanding of global economics and new markets as the world becomes more connected. They may work in different sectors such as banking, corporate finance, insurance companies, or even in government agencies. The future requires that financial analysts **will be studying** new rules and industry standards to make sure they are doing things right.

By the time 20 years **will have passed**, the job of a financial analyst **will have changed** into a more dynamic and digital role, needing constant learning in the changing financial world.

## 3. Bioengineer (science profile)

[https://ru.freepik.com/free-photo/female-scientist-typing-on-her-computer-the-data-from-last-scientific-tests-chemistry-lab\\_22620045.htm#fromView=search&page=1&position=18&uuid=a1ce2a9e-75ca-4556-9164-9a39bd31af0d](https://ru.freepik.com/free-photo/female-scientist-typing-on-her-computer-the-data-from-last-scientific-tests-chemistry-lab_22620045.htm#fromView=search&page=1&position=18&uuid=a1ce2a9e-75ca-4556-9164-9a39bd31af0d)

A bioengineer is a professional who uses engineering principles to solve problems in biology and medicine. It is one of the most needed future professions, bioengineers **will be** important in developing new medical technologies and treatments.

Key skills for a bioengineer include a strong knowledge in biology, chemistry, and mathematics. They must also have good problem-solving skills and be able to work well in a team. Bioengineers need to be creative and innovative to come up with new solutions to problems.

In addition to these key skills, bioengineers also need to have strong digital skills. Very soon **they will have worked** mostly using computer software to design and analyze experiments, as well as to create models. Digital skills **will become** more important in bioengineering as technology **will play** a larger role in research and development on the future.

Bioengineering science is developing quickly and doctors hope that bioengineers **will make** new medical stuff like better artificial arms and personalized medicine, so that doctors **will help** those people whom that cannot help now. Bioengineers work **will really help** improve healthcare for lots of people.

#### 4. Content designer (liberal arts profile)

[https://ru.freepik.com/free-photo/female-web-designer-with-papers-and-notes-in-the-office\\_32520499.htm#fromView=search&page=1&position=29&uuid=24a5e53b-e7ef-4f55-b7c9-e0243b8af562](https://ru.freepik.com/free-photo/female-web-designer-with-papers-and-notes-in-the-office_32520499.htm#fromView=search&page=1&position=29&uuid=24a5e53b-e7ef-4f55-b7c9-e0243b8af562)

In the future, the role of a content designer **will become** increasingly important in the digital world. Content designers **will be continuously creating** exciting and user-friendly content for websites, apps, and other digital platforms. They **will use** their creativity and design skills to

develop visually attractive and informative content that attracts the attention of users. In the coming years, content designers **will need** to stay updated on the latest design trends and technologies to create content that is both visually attractive and useful. They **will be working** closely with other members of the design and development teams to make sure that the content they create is in line with the goals of the project. Overall, the future of content design looks promising, with content designers playing a key role in creating the digital experiences of users across various platforms. Their ability to develop interesting and user-friendly content **will be** essential in a rapidly changing digital environment.

11 Alice: Of course! If you think about it, she's always less strict when you explain yourself.

2 Tom: Hey, Alice. Not good.

13 Alice: No problem. See you!

8 Tom: I had no time. If I had had more time, I would have cleaned my room. What should I do?

3 Alice: Why so?

6 Tom: I didn't clean my room.

7 Alice: Oh, Tom... Why didn't you do it?

10 Tom: Do you think she'll understand?

9 Alice: If I were you, I would talk to mum and explain that you just didn't have enough time to tidy up and you will do it soon.

4 Tom: Mum is angry at me.

5 Alice: What for?

12 Tom: You're right. Thanks. Bye!

1 Alice: Hey, brother. How's it going?
